THE FIRM

"**C.M. Surface Treatment S.p.A.**" has a staff of 50 employees and is situated on the outskirts of **Modena** in the eastern industrial region of **Italy**, just 40 km = 25 miles west of Bologna. The sole company activity is the design, manufacture, and sales of **automatic blast cleaning and shot peening equipment** and over 40 years of experience are behind every C.M. product. Approximately 150 standard models are available in ranges including rotary table units, tumble units, hanger units, in-line belt units, and machines for special applications. The most advanced technology, superior construction practices, the finest abrasion resistant materials, and state-of-the-art safety features and environmental protection systems are part of each machine

C.M. commenced its activities as a supplier of foundry equipment including blast cleaning machines. However, very early on all efforts were dedicated to **blast cleaning and shot peening equipment** and to associated dust collection systems. Ever since, the ranges and models of machines built by C.M. has continued to grow. On occasion C.M. furnishes special units, but such a remarkable variety of standard machines and modifications are available that by synthesizing them it is ordinarily possible to derive an **ideal solution to the particular requirements of any customer.**

C.M. has won and maintained the trust of prestigious firms worldwide as a result of its capability to supply **highly reliable and exceptionally durable machines of extraordinary quality and resistance.** Minimized operating costs translate into tremendous savings for customers year after year. Many clients have been operating C.M. machines continuously for more than 25 years with just normal maintenance.

Prominent references of C.M. users exist throughout industry, helping to continually **generate sales and installation of new blast cleaning and shot peening equipment in many diverse industrial spheres** including automotive, bicycle, ferrous and non-ferrous foundry, light alloy extrusion, heat treatment, stamping, forging, glass container, plastics, tool manufacture, gear, and spring.
